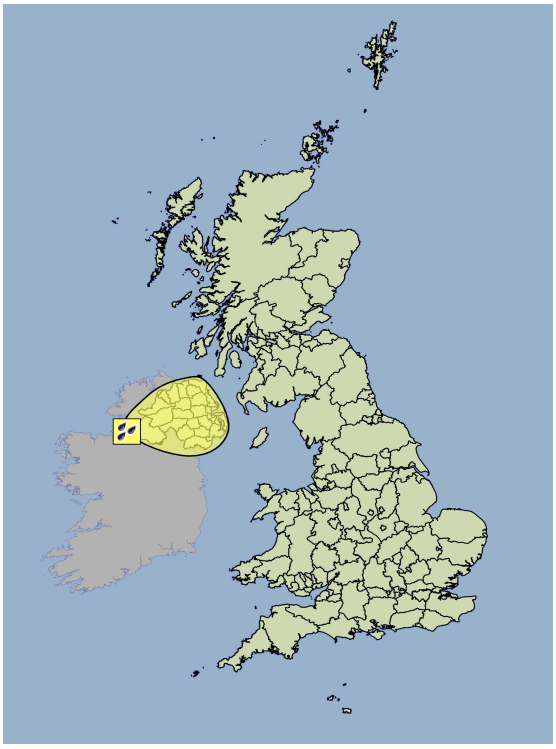
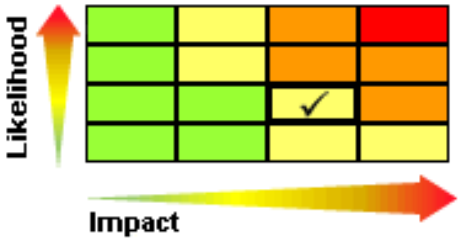
National Severe Weather Warning Service





Chief Forecasters Assessment
A developing frontal system is expected to move slowly east across Northern Ireland during today bringing with it a band of persistent and heavy rain. 20-30 mm of rain is expected to fall widely with as much as 50 mm over south facing hills. The rain will be accompanied by southerly gales, particularly in exposed parts of the east.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **10:40 on Thu, 13th Nov 2014** until **19:00 on Thu, 13th Nov 2014**

A frontal system will produce a period of persistent, and at times heavy rain across Northern Ireland during today, before clearing to the north early evening. The rain is likely to be accompanied by gales in places with gusts of 60 mph in exposed parts of the east.

Following recent wet weather, the public should be aware of the continuing risk of flooding from this next batch of heavy rain.

This is an update to the Warning issued on Wednesday to curtail the warning for much of the evening, before the next system brings wet and windy weather again overnight (a dual rain and wind warning will be issued for Friday morning).
